

PROFILE

Cloud-focused professional with a proven track record in project execution and managed services. Possessing a strong foundation in DevOps tools and methodologies, I am adept at driving operational efficiency and delivering robust solutions. Continuously expanding skill set to stay at the forefront of industry advancements.

SKILLS SUMMARY

- **Operating System:** Linux, Windows server
- **Source Code Management:** Git, Azure Repo
- **Devops Tools:** Jenkins, Docker, Kubernetes, Azure DevOps, Sonarqube, Nexus
- **IaC Tools:** Ansible, Terraform
- **Cloud Platforms:** AWS, Azure
- **Endpoint managemnt:** MECM, Intune, Azure active directory
- **Tools/Soft Skills:** Excel, PowerBI, Project & People Management

WORK EXPERIENCE

Cloud & Endpoint management Engineer | [Quadrasystems.net](#)

July 2023 - Present

- **Managed and provisioned Azure and AWS** infrastructure (e.g., compute, storage, networking) using both Infrastructure-as-Code (Terraform) and manual methods, ensuring scalability and reliability.
- **Deployed and managed applications on AWS**, implementing strategies for high availability, auto-scaling, and efficient resource utilization.
- **Configured and maintained hybrid cloud connectivity** through the implementation of Site-to-Site and Point-to-Site VPNs in Azure and AWS.
- **Established comprehensive monitoring and alerting solutions** for virtual machines using Prometheus and Grafana, enabling proactive incident response and performance optimization.
- **Developed and maintained automation scripts (Bash)** for critical tasks such as data backups and scheduled jobs (Cron).
- **Leveraged configuration management tools (MECM and Intune)** to ensure consistent patching and application deployments across on-premises, virtual, and server environments.
- **Collaborated with cross-functional teams** to manage Active Directory and Azure Active Directory, implementing and enforcing security policies for users and machines.
- **Led technical projects, effectively communicating with customers** to understand requirements, implement solutions, and demonstrate results, contributing to a significant (up to 95%) improvement in security compliance for one key client.
- **Implemented and managed CI/CD pipelines** using Jenkins and GitHub Actions for seamless application deployments across cloud platforms, ensuring continuous delivery and high availability.
- **Generated timely and insightful reports on project progress** and system performance for stakeholders.
- **Proactively engaged with customers** to provide regular project updates, discuss next steps, and ensure successful project completion.
- **Successfully managed and resolved critical escalation incidents**, providing timely solutions and consistently exceeding customer satisfaction targets.
- **Skills:** Azure, Aws, Linux, Windows server, Git, Jenkins, Docker, K8s, promethues and grafana, bash scripting , MECM, Active Directory, Intune.

PROJECTS

MERN Stack Application Deployment in Cloud (AWS)

- Provisioned AWS infrastructure (S3, Beanstalk, DocumentDB/MongoDB Atlas) and deployed a MERN application. Configured ELB for scalability, CloudFront for content delivery, and Route 53 for DNS.

Hybrid Cloud Infrastructure Provisioning (Azure & On-Premise)

- Configured Azure servers (Windows/Linux) and established Site-to-Site VPN to connect with customer's on-premise environment, ensuring seamless communication.

Infrastructure Monitoring with Alerts (Prometheus & Grafana)

- Implemented monitoring for applications and SQL Server using Prometheus and Grafana, creating custom dashboards and configuring alerts for bandwidth and storage issues.

Infrastructure Provisioning using Terraform (Azure & AWS)

- Automated the provisioning of VMs, VPCs, and Subnets in both Azure and AWS using Terraform. Integrated MECM and SQL installation into the process.

Application Deployment using Azure DevOps (AKS & App Service)

- Deployed a full-stack application using Azure DevOps pipelines to AKS and Azure App Service, managing build and release processes and Azure resources.

10 Tier Application Deployment in EKS (Jenkins)

- Deployed ten application services to EKS using a Jenkins pipeline. Packaged with Maven, scanned with Sonarqube, stored in Nexus, containerized with Docker, and deployed to EKS.

Multistage Pipeline using Jenkins (EKS)

- Developed a multistage Jenkins pipeline to build Docker images, push them to a registry, create an EKS cluster, and perform security scans using Sonarqube, Trivy, and OWASP.

EDUCATION

MCA in Cloud Computing	CGPA - 8.4	2023-2025
Jain Deemed to be a University - Bangalore		
M.Sc. PHYSICS	CGPA - 8.9	2020-2022
Government arts college Coimbatore		

CERTIFICATE

Azure Az 104 - Azure Administrator Associate (Microsoft)

- Core Azure services management: Understands how to manage and implement networking, compute, storage, and security features.
- Azure environment administration: Proficient in provisioning, sizing, monitoring, and adjusting Azure resources to meet business needs.
